

Dr. Christian Wulff visits KÖSTER in Aurich

On Wednesday the 30th of June, Dr. Christian Wulff, the former Prime Minister of Lower Saxony was elected as President of Germany. Last week he was our guest in Aurich. During his summer tour through Lower Saxony Mr. Wulff visited KÖSTER BAUCHEMIE AG on the 24th of June in order to inform himself about the company. As the German economy relies very much on innovative family businesses with international orientation KÖSTER was chosen as a typical representative of such companies.

In the course of a short welcome with tea and cake in our training center Johann and Dieter Köster, Managing Directors of KÖSTER, introduced KÖSTER BAUCHEMIE AG and the waterproofing business to the former Prime Minister Wulff. Dieter Köster pointed out that the importance of a high quality waterproofing is often undervalued, concerning the fact that over 80% of damages in buildings are related to water. Moreover he showed that the same kind of problems exist all over the world which has led to an export quota of over 50% in the last years.

Outside the training center Johann Köster presented several of our products and systems to Mr. Wulff, at the same time explaining to him the field of application and showing the practical uses. In order to express our strong orientation to international business KÖSTER showed 50 reference boards from its representatives around the world.

Dr. Christian Wulff was furthermore very happy to have the possibility to reveal several new KÖSTER anti corrosion products during his visit:

- KÖSTER Repair Mortar NC
- KÖSTER Sewer and Shaft Mortar
- KÖSTER Bridge Coat
- KÖSTER PUR Bitumen

These recently developed products are a very positive symbol for medium-size companies in Germany. Constant research and development is one of the key factors in being competitive and successful in the future.
